Print Setup Guide

Canon | macOS

Follow the steps below to connect your Mac to the Canon copier over the network. In most cases, no driver download is needed.

Step 1: Add the Printer in Settings

macOS can connect to the copier directly using AirPrint. Follow the steps below to add it.

1. Open **System Settings** and go to **Printers & Scanners**.
2. Click **Add Printer, Scanner, or Fax…**
3. Switch to the **IP** tab (indicated by a globe icon).
4. Enter the copier's IP address in the **Address** field.
   *To find the IP address: On the copier's home screen, tap the **123** icon and look for the IP address on the main line.*
5. Set the **Protocol** to **AirPrint**.
6. Click **Add**.
7. To rename the printer, click on it in your Printers & Scanners list and go to **Options & Supplies**.

(Optional) Step 2: Download the Print Driver

If the printer is not discovered automatically or additional features are needed, you can manually install the Canon UFRII driver.

1. Open a web browser and go to **usa.canon.com**.
2. Search for **drivers** using the site search.
3. Search for your **model number** in the driver search field and select it from the dropdown.
4. Scroll to **Software and Driver Results** and download the **UFRII** driver.
5. Open the downloaded **.dmg** file and follow the install wizard to complete the installation.
   Note: You may need your computer password or Admin credentials at this step. If Admin credentials are required, please contact your IT administrator for assistance.

Admin Password Assistance

If you require Admin credentials at any point during setup, please contact your IT administrator for assistance.
